SAMUEL EASTMAN.

REPORT OF THE BOARD OF TRUSTEES.

His Excellency,

SHELBY M. CULLOM,

Governor of the State of Illinois:

SIR: The Board of Trustees of the Illinois Institution for the Education of the Deaf and Dumb have the honor of presenting to you their report of the institution for the years 1878-9 and 1879-80. The report of the Superintendent to the Board with accompanying statements is hereto appended, as a part of the report of the Board to your excellency.

In the recommendations made by the Superintendent in his report, the Board concur with such modifications as are herein suggested.

The institution has pursued the even tenor of its way without any occurrences of special importance requiring extended notice. Its prosperity has been greater than in any previous period of its history, the number of pupils having steadily increased. The general health of the inmates has been quite as good as of the community in general, though it would be reasonably expected that in a class of persons assembled together because of a physical infirmity, many of them receiving their infirmity as a result of disease, that there would be more ill-health than is general in the community at large.

The officers of the institution have observed their usual fidelity in the discharge of their respective duties. The long experience of many of them renders their services of the greatest value, while such as have been added to the corps as novices in this peculiar work, by reason of the large and rapid increase of pupils, are endeavoring as best they may to acquire a knowledge of the intricate methods involved in their new sphere of action.

The prospects of the institution are most encouraging. It is now the largest in the world. Its size makes it practicable to sustain various departments with a degree of efficiency that would be impossible with a small number of pupils, without relatively, vastly greater expense.

The season of 1879 was an exceedingly dry one. The supply of water in wells in the section of country about the institution became very scant, the streams dried up, and the storage of water for city use from which the institution obtained its supply was entirely exhausted.

In consequence of this the Board deemed it necessary to extend the summer vacation to a time from which the water stored by the institution would meet its demands until the rains and melting snows of winter should replenish the reservoir. The pupils being already at their homes for the summer vacation, were upon the order of the Board directed to remain there till the last Wednesday of October, which shortened their term of school six weeks. It was with great reluctance that this extension was ordered, the Board at the same time indulging the hope that a change in the character of the season might justify them in convening the pupils at an earlier date, they having been instructed to hold themselves in readiness to return at a day's notice. In this hope, however, the Board was disappointed, and the result of the protracted drouth confirmed the prudence of the action taken.

The experience of that year may be realized again, a calamity which should by all means be averted if possible. The time which deaf-mutes have in school is too limited for the great work that lies before them in acquiring an education, and should not be encroached upon by any cause that can possibly be avoided. The Board would respectfully refer your Excellency to the remarks of the Superintendent in his report on this subject, and state their approval of his recommendation that a purchase be made of fifty-two acres of land bordering on a small piece now owned by the institution through which runs a stream known as the "Brook". This tract contains an excellent site for an impounding and distributing reservoir, and would also furnish pasture land already much needed. The purchase of this land would require an appropriation of ten thousand (\$10,000) dollars.

In his report to the Board the Superintendent renews his recommendation of two years ago that another institution for deaf-mutes be established in the State by the authority of the General Assembly. When this recommendation was made by the Superintendent, this Board did not believe that another institution for Deaf-Mutes in this State was a necessity, and consequently did not favor the recommendation. While the Board have seen no cause yet to change their views on this subject, still as the number of pupils now in the institution is quite large, and rapidly

increasing, and the necessity for another institution seems to be only a question of a few years, they would gladly see it done whenever the General Assembly shall decide that the proper time has arrived. The Board have no recommendation to make on the subject further than to state, that should the General Assembly conclude to provide for another institution, they would express the hope that the recommendation of the Superintendent in regard to the cottage system may be carried into effect, and suggest that his long experience entitles his opinion on the subject to serious consideration.

Accompanying the Superintendent's report will be found a financial statement showing the expenditures from the several funds appropriated by the General Assembly. These have all been expended as provided by law except the one for transforming the old barn into a cottage, which work is now in progress, and will be completed in a few weeks exhausting the appropriation; and the one for the construction of fire escapes which has not been drawn upon. The erection of spiral fire-escapes as contemplated and recommended in our report two years ago would afford but one means of egress from each story. It was therefore deemed better to have them erected in the form of verandas which would afford nine avenues of escape from each story, but the advance in the price of iron placed this beyond the amount of funds appropriated, and the Board decided to defer the enterprise till the matter could be laid before the General Assembly, and a supplemental appropriation of one thousand and three hundred (\$1,300) dollars could be recommended. The Board has not been without solicitude respecting the safety of the inmates should a fire occur in the institution, but deeming veranda fire-escapes so much more efficient in time of need, as well as useful in other respects which the spiral fire-escapes would not be, they have awaited the action of the General Assembly. Unrest upon this subject has been much less than it would have been, had not thermostats been placed in all the rooms, attics, closets and halls of the buildings. Six hundred of these are in various portions of the institution, and all connected with an electrical battery, and with fire alarm bells so situated as to give the most effective alarm. There has been no fire since their introduction to call them into use, but frequent tests have proved their entire reliability in giving an early warning of an incipient fire. Had this fire alarm system been in operation here two years ago it would have prevented the damage done by fire on the 29th of March 1879.

There are several other subjects enumerated and enlarged upon by the Superintendent in his report, which it will be unnecessary for the Board to discuss further than to state their approval of them. As shown in that report there will be needed for the next two years appropriations as follows.

For ordinary expenses, per annum.....	\$85,000.00
For repairs and improvements, per annum.....	3,000.00
For library, per annum.....	500.00
For purchase of 52 acres of land	10,000.00
For purchase of 4 lots of land.....	4,000.00
For erection of barn.....	3,000.00
For erection of bakery.....	3,000.00
For erection of cottage for girls.....	5,000.00
For erection of veranda fire-escapes.....	1,300.00
For erection of store.	5,000.00
For erection of filter and filter house.....	3,000.00
For electric light.....	2,000.00

In conclusion the Board would express their high appreciation of the honor done them by your Excellency in entrusting to them the responsibility of administering the affairs of this great and excellent institution.

Respectfully Submitted,

M. A. CUSHING, *President.*

Illinois Institution for the Education of the Deaf and Dumb,

SEPTEMBER 30TH, 1880.

REPORT OF THE SUPERINTENDENT.

To the BOARD OF TRUSTEES of the Illinois Institution for the Education of the Deaf and Dumb:

GENTLEMEN: I have the honor to present to you the Twentieth Biennial Report of the institution which his Excellency the governor of the state of Illinois has committed to your supervision.

There are no questions of a professional nature requiring discussion, and no events of an unusual character have occurred during the past two years, which require more than a passing notice, so that this report will with propriety be quite brief.

At the date of the last report, September 30th, 1878, there were

Pupils remaining on Rolls.....	516	
Pupils since admitted	196	
Pupils since readmitted.....	1	713
There have been graduated, died, dropped and discharged.....	156	
Remaining on Rolls September 30, 1880.....	557	713
Present September 30, 1880.....	481	

The following table is an exhibit of the admissions, attendance, discharges and present attendance by county distribution:

[NOTE.—The first column of figures represents the number of inmates admitted from each county from October 1, '78, to September 30, '80; the second the number of days board given to inmates from each county from October 1, 1878 to September 30, 1880; the third the number graduated, honorably discharged, died, dropped from the rolls and dismissed. The fourth shows the actual attendance Sept. 30, 1880.]

The small average for the months of September and October 1879 is due to the extension of the summer vacation in consequence of the failure of the water supply, which will be referred to at more length in another part of this report.

During the last fiscal year the gross number in attendance comprised five hundred and sixty four (564) pupils, while the average attendance during the school term was four hundred and fifty six (456). The average for the entire year including the vacation was three hundred and seven (307). In this year the indebtedness incurred on account of ordinary expenses was eighty-eight thousand, one hundred and twenty-four dollars and sixty-one cents (\$88,124.61), of which twelve thousand three hundred and sixty-nine dollars and eighty-two cents (\$12,369.82) was paid by income arising from the sale of clothing, live-stock, postage, stationery, and articles manufactured and raised by the institution, thus reducing the actual cost to the State to seventy-five thousand, seven hundred and fifty-four dollars and seventy-nine cents (\$75,754.79). This is a fixed amount and may be taken for a dividend in determining the *per capita* cost of each pupil during the year. What number shall be taken as the divisor however, is a question upon which there may be some difference of opinion. While some persons would take the average for twelve months, three hundred and seven (307) and use it as the divisor making the *per capita* cost two hundred and forty-six dollars, and seventy-five cents (\$246.75), others would take the entire number who had attended the institution during the year, five hundred and sixty-four (564) for the divisor, thus making the *per capita* cost one hundred and thirty-four dollars and thirty-one cents (\$134.31). I believe neither of these to be the most just one. The average number of pupils present during the school year is the number who are receiving the advantages of the institution, and in my judgment this number, should be taken for the divisor, since the largest number includes a greater provision than the institution has at any time rendered, and the smallest does not include those whom at

any time it has been required to provide for. The true *per capita* cost in this year I should say, was determined by dividing the net indebtedness incurred, seventy-five thousand, seven hundred and fifty-four dollars and seventy-nine cents (\$75,754.79) by the average attendance for the school term—four hundred and fifty-six (456) which gives us for a quotient one hundred and sixty-six dollars and twelve cents (\$166.12), the true *per capita* cost for the year.

Accepting this sum as a dividend with which to ascertain the *per capita* cost per week, we may take for a divisor the number of weeks in a term which is forty (40), and obtain as a result, four dollars and fifteen cents (\$4.15), or fifty-nine cents (59c.) per day; or taking the number of weeks in a year—fifty-two—for a divisor—which I believe to be just since the expenses of the institution are mostly continued through the vacation, because repairs and refurnishing are chiefly effected then, and the salaries of officers due at the close of the term are not paid in full till the expiration of the quarter which includes not only all the vacation, but also a portion of the term following it, we have for a quotient the weekly *per capita* cost, three dollars and thirty-two cents (\$3.32), or forty-seven cents (47c.) per day. A further analysis of this expense will show that eight (.08) per cent. is for superintendence, including salaries of the Superintendent, clerks, matrons, supervisors, physician, nurse and attendants, thirty (.30) per cent. for instruction, including instruction in the school proper, in articulation, painting, drawing and penmanship, five (.05) per cent. for industrial instruction, seven (.07) per cent. for attendance, including cooks, bakers, chambermaids, dining-room help, teamster, groom, porter, farm-hands and laborers; twenty-five (.25) per cent. for food, four (.04) per cent. for repairs; four (.04) per cent. for fuel; two (.02) per cent. for light; one (.01) per cent. for books; two (.02) per cent. for furniture; two (.02) per cent. for machinery; one (.01) per cent. for water; two (.02) per cent. for freight and transportation; one (.01) per cent. for laundry supplies; one (.01) per cent. for medicines; five (.05) per cent. for miscellaneous purposes.

During the last summer the institution suffered a serious loss in the resignation of two experienced teachers. Prof. John W. Swiler, A. M., after remaining a member of our corps of instruction for thirteen years, resigned his position with us to take upon himself the more responsible and arduous position of Superintendent of the Institution for the Deaf and Dumb in the State of Wisconsin. Prof. Swiler while with us had shown

himself an efficient and enterprising teacher of deaf-mutes, and we believe possesses the requisite qualifications for a successful superintendent. While there is reason to regret Prof. Swiler's departure from us, there is also reason to congratulate the institution in Wisconsin and the people of that state upon his acquisition.

Miss Mary Dutch, after teaching deaf-mutes for twelve years in this institution, resigned her position to seek a restoration to health elsewhere. These were the more serious losses to the institution, as the profession of deaf-mute instruction is one as distinct and well defined as any other profession practiced in society. There is no other profession that requires a longer training, and in which experience is of more value than in this one. To be able to perform its labors efficiently one should be a thorough master of the language of signs, an achievement that can only be effected by a careful and close study of this peculiar language, for a period of not less than ten years. A smattering of this peculiar language may be acquired in three or four years, but only after many years of patient effort in the midst of, and in constant association with deaf-mutes, can it be fully acquired. The efficiency of an institution is dependent on the efficiency of its officers. The time allotted deaf-mutes for the acquisition of an education is so short, that it is of the first importance that all officers who have to do with their oversight, and instruction, should be of the best ability, and most extensive experience obtainable. When such officers are secured, it is of imperative importance that they be retained, and to this end inducements to continue in this special department of labor should be held out to them. It is impossible to place a money value upon such experience and ability, since when the institution loses it, it cannot immediately replace it with the same in other persons. When such a misfortune befalls an institution, the damage can only be repaired by taking into training a novice, whose honest and well-meant efforts after many blunders and mistakes, will qualify him for full duty, only after a period of many years. In the meantime, the institution suffers much, and its pupils more. It may sometimes occur that experienced officers can be drawn from another institution, but this only transfers the impairment from one locality to another, where the deficiency must be remedied. It is of almost daily occurrence to receive applications for employment in this institution, but not more than one in a hundred of those who apply for situations as teachers have any knowledge whatever of the work they desire to enter upon, and not more than one in five hundred are experts in it.

During the biennium just closed the rapid increase in the school has rendered necessary an increase of the number of instructors. To meet this demand and supply vacancies, seven novices and two experienced teachers from other institutions have been added to our corps of instruction. One of the last has taught for eight years in the Indiana Institution, and the other for two years in the Institute in Michigan. The novitiates are using their best endeavors to qualify themselves for the new sphere of labor upon which they have entered. The results of their work in view of their limited experience is quite commendable, and give promise of good success in the future.

I should not do full justice were I to omit assuring you of the zeal and enthusiasm of all the officers of the institution. They are all prompt, industrious and earnest, seeking by frequent comparisons of views, failures and successes, to improve themselves to the utmost, and to secure continually better, and better results. To say that they are not satisfied with present achievements, is but to indicate their interest in their pupils, and their great desire to do the utmost possible for them.

The ordinary child in the possession of hearing and speech, usually starts upon his school life as is contemplated by the law of this state, at the age of six years, and continues it for twelve or fifteen years. In addition, he receives far more real education in the family circle, the church, the lecture, the play-ground, the shop, the field and general society, than he does in the school room, though these are not usually regarded as educational influences. Conversation is so powerful an educator, that many children will learn without apparent effort, many things that would be to them most difficult tasks from the pages of a book. The deaf-mute is debarred from all these most powerful and effective means of mental developement, and is given the exercises of the school-room alone. He commences in his curriculum where, and with the same things and simple ideas that the normal child commences to learn on the lap of the parent; and while the latter is learning constantly during all the hours of restless wakefulness, the deaf-mute receives instruction for four or five hours per day only, during the few years of his school life. The principles of mental action are the same with deaf-mutes as with other persons, though the mode of its manifestation is greatly modified by their peculiar disability. The human mind never acts until acted upon. Just how soon external objects first act upon the mind is an abstruse question of psycho-genesis which mental philosophers have no much dwelt upon. It is, however,

unquestionably in very early infancy. Whichever of the senses is the first to perceive external influences, giving rise to mental action and response to them, we may not know accurately, but it is indisputable that the sense of hearing conduces more to spiritual development than all the other senses combined. The most susceptible time of a human life for such development, and when it is most rapid and enduring, is in the years of early childhood, when development of mind is not only taking place, but mental habit is forming. So true is this, that an eminent metaphysician has said, that an individual receives more impressions in the first seven years of his existence than in all his after life, however long he may live. It is greatly to be regretted that deaf-mutes lose the great advantages of these most important and impressible years. By the time they have attained their eleventh or twelfth year, many of the most precious possibilities of their lives have gone. I think in view of these facts and in the light of experience that this institution, and very nearly all others, have acted upon a mistaken principle in not receiving deaf-mute children younger. We who are young, were told and taught by those who preceded us in this specialty, that from ten to twelve years was the youngest age at which deaf children should be received into an institution for purposes of instruction. With becoming veneration for elders, we accepted the teaching of the fathers, and carried it into practice as they had done. The architectural arrangement of the institution was based upon this thought, and provision for the proper care of children under this age was not carried into effect. But parental solicitude in numerous instances of late years has pressed us urgently to take children younger. I think the loss of family records, confusion of dates, and the forgetfulness of some parents as to the exact date of their children's birth, have in some cases circumvented our usual practice, and secured places for children in the institution younger than was the prescribed age for admitting them. The few cases of the kind for the most part did quite well. Not, however, till the cottage for small boys was prepared for their reception and we had a favorable opportunity for putting the matter to the test of practical experiment, were we able to acknowledge the mistake of preconceived ideas on this subject.

One of the mistakes of the past was in not making suitable provision for the care of children of more tender years. The disabilities of children impose upon them certain restraints, but in no case dispossess them of their rights, chiefamong which is the right to a good practical education.

The years most favorable for education are utilized by hearing and speaking children under the common school system of the state. Why should not the same years be utilized to the benefit of the deaf-mute child? There is no cause to be assigned founded in reason or justice, however much considerations of convenience may be urged. If the deaf child is entitled to an education at all, he is entitled to the best one that can be given him within the scope of the obligation of society to him, which with deaf-mutes is the same in extent as with their more favored hearing and speaking fellows. In former years we have endeavored to impart to our pupils a knowledge of language and the rudiments of a good English education, in eight terms, commencing with their eleventh year of age. But experience has shown that the time allotted is too short for the majority of natural deaf-mutes to accomplish this great undertaking. The officers of the intellectual department after long and careful consideration and frequent consultations have deemed it important to extend the course of study to ten terms. With this extension of the curriculum our pupils, upon their graduation will still not be fully qualified to enter the college for deaf-mutes at Washington, D. C., an institution for their higher education sustained by the general government. The course of study which we are now endeavoring to carry our pupils through is as follows—

- I. Year. Language Lessons.
- II. “ Language, Arithmetic, Addition and Subtraction.
- III. “ Language, Arithmetic.
- IV. “ Language, Outline Geography of U. S., Arithmetic, four rules, text-book.
- V. “ U. S. History, Geography, Arithmetic.
- VI. “ U. S. History, Universal Geography, Arithmetic.
- VII. “ Composition, Physical Geography, Natural History, Arithmetic.
- VIII. “ Composition, Natural Philosophy, Chemistry, Arithmetic.
- IX. “ Composition, Botany, Physiology, Accounts.
- X. “ Composition, Political Economy, English Literature, Moral Science, Algebra.

The proper care of the inmates of such an institution as this, is a subject that must ever occupy much of the thought and attention of one responsible for their welfare. Precisely what the extent of provision made for them should, be is a question which no one has yet clearly and conclusively defined. There are conflicting opinions among persons upon

this matter. An experience of twenty-five years in the work of administering such provision as a generous public has bestowed, has brought me into contact with almost every shade of opinion on this subject. On the one hand it is insisted, that being in a sense the wards of the state, the dignity and honor of the state require that the character of the provision made for them should comport with that dignity. On the other hand it is urged that, being beneficiaries of the state's bounty and benevolence, the provision for them should be conformed to that provided for paupers and criminals. I believe that both these views are wrong. The institution is not designed to serve as a monument or exponent of the state's wealth and dignity; other measures of public enterprise can more effectively and appropriately do this important and honorable service. Neither is the institution an asylum for the refuge of deaf-mutes, or an alms-house where charity is to be dispensed to them. It is an establishment designed to furnish them, in conformity with the requirements of the constitution of the state, and the enlightened spirit of the age, an equivalent for what is furnished the normal youth and children of the commonwealth, in the common school, from which the deaf-mute is excluded by his infirmity. The state is not called upon to supply them with any greater advantages than are enjoyed by their hearing and speaking brothers and sisters. Its sense of justice will not prompt it, or its dignity and self-respect allow it to do less. In administering this institution's affairs its management have sought to yield to its pupils about such comforts of diet and housing as are found in the well-regulated and well-to-do homes of this state, avoiding at once the sumptuousness of the wealthy and the meagreness of the indigent. In the criticism that is so freely and with very great propriety made upon this, as well as all other public institutions, it has been a satisfaction to find ourselves between two fires—one party insisting that we were doing too much, and the other that we were not doing enough. If a happy medium has been attained, the object in mind has been secured.

The buildings of the institution are extensive and will accommodate five hundred pupils. They would seem to a casual observer capable of accommodating a much larger number than this, and if used for most other purposes they would do so. But let it be remembered that for each of our pupils a place must be provided in a school-room, a sitting-room, a chapel, a dining-room, a shop, and a dormitory, so that for five hundred pupils three thousand separate provisions must be made, beside ap-

pliances and rooms for laundry and culinary work, places of recreation, ablution, and other means of personal cleanliness. The necessities of the case thus involve extensive architectural structures, which of necessity, being designed not for a single generation, but to endure through the life of the commonwealth, must be strong and durable. But magnitude is not magnificence, nor is neatness, and order, and convenience extravagance, as some at times have erroneously supposed.

In the earlier history of this and other institutions, as has already been stated, the opinion was held that deaf-mutes should not be taken into school at an earlier age than ten years. The imperfect facilities then enjoyed for the care of children of more tender age than that, may in a measure have been the cause of this mistaken opinion and practice. But with the growth of the institution, and the increasing experience of its officers, we have been able so to classify the pupils as to separate them into congenial divisions, removing the younger from the older, and afford an opportunity for the special care of the younger suited to their condition. This has been especially advantageous in the case of the little boys, who for the first year in school are now domiciled in a cottage devoted to their exclusive use. Here they are under the constant care and supervision of kind and efficient women, who look after their wants much as a mother does at home. This has proven so advantageous, and so much better than commingling all ages indiscriminately as formerly, that I am fully convinced a due regard to the welfare of the little girls indicates that a cottage for their exclusive use should be erected.

While older girls are more regardful of the tenderness of little children than older boys are, yet it is impossible to expect them to be wholly oblivious of the annoyances that little fellows perpetrate upon them, and to be always as patient with their interferences as might be deemed desirable. In the best regulated families comprising only a small number, the older sisters are not unfrequently exasperated by the prying curiosity, the restless activity, and the acquisitiveness of the younger ones. How much more likely is this to occur in a household of five hundred youth of varying ages and temperaments. In view of these facts I suggest to your honorable Board the importance of applying to the General Assembly for means to erect a cottage for the exclusive use of little girls, where they may not only be more properly cared for, but may be supplied with the peculiar means of recreation and entertainment adapted to their tender age. I believe that no step could be taken at this time that would be

more conducive to the general advancement of the pupils, and the elevation of their standard of scholarship at the time of their graduation. I deem this the more important, because it will enable the institution to utilize two of the most impressible and valuable years for learning, which, as I have else where stated in this report are now lost and wasted in their homes, where in most cases very little is taught them beyond the absolute requirements of the animal portion of their nature. The years I would thus redeem are the ninth and tenth, and in some cases the eighth. This provision might be made at comparatively small expense, when contrasted with the immense advantages it would yield. In carrying this out, the demands of public sentiment will be met, which has for years been pressing upon the institution as it became better understood, children of younger age than formerly, so that the average age of the pupils is now several years less than in the past. This recommendation is not made with a view to enlargement of the institution, but to its improvement. The number of pupils now in attendance is sufficiently large. The school building, dining hall, and industrial building are adapted to the comfortable use of five hundred pupils. I would not deem it the wiser course to enlarge either of these, though there are remaining on our rolls as pupils after the discharges of the last two years five hundred and fifty-nine, who should now be at school, with probably one hundred and fifty more in the state who should also be under instruction at the present time. I think it would be better to establish another institution than to increase the number of pupils here. Accordingly I renew my recommendation of two years ago, that the subject of another institution for the deaf and dumb in the state of Illinois be presented to the general assembly. As stated then, "I believe that the time has now arrived when another institution for the education of the deaf and dumb in Illinois, though not a necessity, is desirable and advisable, since there are unquestionably enough deaf and dumb children of school-attending age in the state to constitute two good institutions, if the condition of the state treasury will warrant the greatly increased expenditure involved. * * * * Should the general assembly so determine I am quite convinced that an institution for this class might be erected upon a principle different from any we yet have, with decided advantage, and accordingly I would recommend that an institution combining the excellences of both the congregate and cottage system be established. I believe this practicable while the disadvantages of each may be avoided."

Perhaps the experience of a quarter of a century in the management of this institution may justify me in the expression of views on this subject without impertinence. The relative merits of the congregate and cottage systems of institutionary organization, has been a subject of much discussion among persons who have made a study of questions of this character. It has not, however, been so much canvassed with reference to institutions for deaf-mutes as for some other classes of unfortunates. Much that has been written has been from the standpoint of the theorizer, while some has been given forth as the result of practical experience of workers. A splendid architectural structure is indeed a thing of beauty, and a joy forever, and an embellishment to a town or neighborhood in which citizens of the locality may justly take pride, but desirable as this end may be, it should never be allowed to become paramount in the establishment or erection of an institution for any class of unfortunates. Just such structures as will most effectually promote their improvement, and ameliorate their condition should be erected. I am quite positive that massive foundations, glittering pinnacles and lofty domes are not necessary adjuncts of a deaf-mute institution, however useful they may be elsewhere. The buildings of such an institution should consist of small disconnected structures. The lodging houses should each be large enough to furnish dormitories and sitting rooms with lavatory for twenty-five or thirty pupils. The number of these lodging houses will be determined by the number of grades contemplated in the classification of the school. With the increase of numbers an additional one can be erected conveniently, and at comparatively small expense. There should also be school-houses, shops, natatorium, refectory, sanitarium, cuisine, gymnasium, chapel, barns and other out buildings. The material beauty of such an institution should not be in one or two lofty buildings, but in the beauty of its location, and the tasteful arrangement of its various small buildings with the proper intervening lawns, parterre, drives, and mall. Architecture is unquestionably an educator of great power; but the architecture that forces upon an assemblage of youth an uncongenial, and unnatural association, cannot be promotive of as good results as one which favors the separation of growing minds and inchoate characters into agreeable, and becoming companionships. The institution which I believe should be established by our general assembly, should be located upon a tract of land of not less than two hundred acres, upon a lake or river, having at once an unlimited and perpetual

supply of water, with rapid and perfect drainage, with diversity of level and undulating land, with elements of natural beauty in itself, and a beautiful outlook in the distance. Its structures should comprise a school-house, refectory, cuisine, sanatorium, chapel, industrial building, cottages for occupancy of pupils, natatorium, laundry, gymnasium, executive building, superintendent's residence, art hall, agricultural building, conservatory, store, boiler and engine house, coal house, horse barn, cow barn, piggery, ice house, gas house and porter's lodge. The entire cost of such an institution would probably not differ much from the cost of one upon the system heretofore practiced, but its efficiency, with a competent corps of officers, should be much greater.

I do not mean to imply by the foregoing remarks that the past has not done well in bringing our pupils forward, but that in the light of experience I see there is a more excellent way, which I greatly desire may be tried and successfully inaugurated by our proud and noble state. The pupils whom we have sent away with the benedictions of the institution are mostly doing well as useful members of society. Of recent graduates one has lately secured a situation as teacher in a neighboring state; another a teacher in the deaf-mute schools of the metropolis of our state; one has become an editor of a monthly periodical; one has been made supervisor of our own institution, one has been appointed teacher of painting and drawing in the institution of another state; another has for several years been instructing private classes of hearing and speaking persons in painting and drawing; two others have been added to our own corps of instruction. One while still a pupil has improved her vacation in teaching painting to a private class at her home. Many are upright and successful artisans in the shops of the cities and country, and many more may be found engaged in agriculture in this and other states—all making good livings for themselves and their families, enjoying the respect of the community as useful and honorable members of society. What these would have been without education it is unnecessary now to discuss. The institution is a success so far as qualifying its pupils for the responsibilities of life and honorable citizenship are concerned. Though it has cost the state large sums of money to sustain it, yet not to have done so would have cost society far more. None of the former pupils of this institution are in prisons, jails or almshouses. Many of them would have been there as life-long burdens upon society but for the benefits and enlightenment they obtained here. "An ounce of prevention is

worth more than a pound of cure," is an old and true aphorism, but as a preventive of pauperism and crime among deaf-mutes the principle of the old proverb is doubly true, as to this institution, since without the preventive, the disease of crime and vagrancy being contracted by deaf-mutes there would be no possible cure.

Before concluding this report it will be well to consider several other subjects to be presented to the general assembly.

For ordinary expenses, there will be required eighty-five thousand (\$85,000.00) dollars per annum, which may be classified as follows:

Attendance.....	\$43,000.00
Food.....	18,000.00
Clothing.....	5,000.00
Laundry Supplies.....	1,000.00
Fuel.....	5,000.00
Light.....	2,000.00
Water ...	600.00
Medicines and Medical Supplies.....	400.00
Freight and Transportation.....	2,000.00
Postage and Telegraphing.....	500.00
Books and Stationery.....	1,200.00
Printing and Advertising.....	200.00
Amusements.....	200.00
Instruments and Apparatus.....	400.00
Household Expenses.....	600.00
Furniture.....	1,700.00
Repairs, &c.....	3,700.00
Tools.....	100.00
Machinery.....	1,500.00
Farm Stock, &c.....	3,000.00
Insurance....	100.00
Shop Expenses.....	1,700.00
Expenses not classified....	100.00
	\$92,000.00
Less income not from state.....	\$7,000.00
Estimated cost per annum.....	\$85,150.00

The average number of pupils present the first year will be five hundred and twenty-five, and for the second five hundred and fifty. The *per capita* would thus be one hundred and sixty-one (\$161.90) dollars and ninety cents the first year, and one hundred and fifty-four dollars and fifty-four cents (\$154.54) for the second, or one hundred and fifty-eight dollars and twenty-two cents (\$158.22) per annum for both years.

Within a few years baking and confectionery has been added to the trades taught in the institution as an adjunct of its industrial department. It has been quite successfully pursued by a number of pupils who can at that business earn a good living. The operations of this department are not as extensive or varied, as they should be to impart an accurate knowledge of the business. The building used for it was originally designed for an ice-house, and is altogether too small for its present uses, having but one room about twenty feet square. A new one should be erected, having rooms for a good large rotary oven, for storage of flour, bread, pies, &c., and space sufficient for twelve or fifteen apprentices to work simultaneously. This pursuit is not only a good one in general society, but for such an institution has the additional advantage that its produce can be at once consumed by the institution itself, and thus avoid competing with outside enterprises, a consideration that I deem of importance when it is practicable to effect it.

Another much needed improvement is a good store for the proper keeping of all supplies used by the institution. The quantities of groceries, dry-goods, clothing, books, stationery, medicines, *et cetera*, annually required, is so large that they should as far as possible be obtained at wholesale rates. The law of the state evidently contemplates this, in its requirement that the furnishing of certain supplies shall be let to bidders after due advertising. It has been my desire and endeavor to follow this plan as far as practicable, but a serious obstacle has been encountered in the absence of a good and suitable place for keeping the goods when purchased. The proper plan would be to have a good and complete store, to which everything purchased for the institution, and all produce of the garden and industrial department, should be taken, and placed under the keeping of a competent store-keeper who should issue supplies only on requisitions duly authorized, and should keep with all departments an accurate system of accounts. Heretofore, as at present, a certain class of supplies have been kept in the basement, and another in the fourth story of the main building; another in the school-house; another in the shoe-shop; another in the printing-office; another in the cabinet-shop; another in the machine-shop; and another in the cellar of the industrial building. It is impossible to have them better concentrated for the want of a suitable store-house. With a proper store these could all be brought together and more economically dispensed, beside being more accurately accounted for than is possible with our present limited

facilities. This subject is one of much more consequence than a casual observer would suppose. The magnitude of the institution is such, that it is of great importance that even the small matters be looked to closely, for in their aggregate they comprise a large interest.

The land owned by the institution is not sufficient to answer its requirements of garden and pasturage, so that for several years we have been obliged to rent land for grazing purposes. There is no article of diet more healthful for children and youth, than good milk. Thirty cows are needed to supply the milk required for culinary and table use for the present household. The produce of fifty cows could be used to good purpose. Milk already enters largely into the dietary of the inmates and could be more extensively used if the necessary pasture land was available. A tract of land comprising fifty-two acres, which the institution has rented for a number of years is offered for sale, its former owner, Col. James Dunlap, having died during the last year. This tract joins a piece of land purchased by the institution several years ago through which runs a stream called "The Brook," for an impounding reservoir, or rather catch-basin to furnish a water supply. It was thus used for a number of years when the city of Jacksonville constructed water works and contracted to supply the institution with all the water it might require for a period of ten years. The water-works of the institution were consequently disused, and the machinery sold, with the thought that the city would always have an abundance of water, and would gladly for all time supply what might be needed by the institution at reasonable cost. The experience of the last year, however, has shown that the city's water-works are not sufficient to meet the demands of a season of protracted drouth, their supply having been exhausted in the fall of 1879 and not fully replenished till the spring of 1880. The capacity of the city's impounding reservoir has been enlarged during the past year, but the increasing use of the water will soon place the public in the same condition as before the enlargement was made, unless still further additions are made to present capabilities of storage. Should this not be done, and should the city at the expiration of the present contract in 1885, decline to renew the contract, or make another to supply the requisite amount of water, it would become necessary to return to the system the institution had formerly practiced. On this account the ownership of the tract of land now needed for pasturage, would be of the utmost importance for the passage of pipes and the construction of an additional reservoir. In view of all

these facts I respectfully suggest that this important purchase be urged upon the general assembly. Should the general assembly approve the suggestion and authorize the purchase of the land whenever it became necessary to utilize it for the purpose of furnishing water, the pumps at the brook could be operated by our present engine, by transmission of power through a wire rope running from the engine-room in the industrial building, to the pumps which would be about one mile distant. It would thus be unnecessary to erect any extensive building there, or to procure any boilers, or employ an engineer to operate the machinery. No considerable amount of fuel would be required, for the pumps would then be operated at such times as the engine would be running for other purposes. The water being thus economically pumped into a large reservoir on the eminence included in the tract of land whose purchase is proposed, would flow by the force of gravity to all parts of the institution building not excepting the highest attics. If it should become advisable to connect the other institutions of the state in this locality, to it, and supply them from the same source, it could be done with an increase in the size of the reservoir and laying pipes to those institutions. The water that would be gathered at this point would be abundant for all the requirements of the institutions, coming from a water-shed that by some well informed persons is thought to be superior to the one from which the city now obtains its supply. The purchase of this tract of land will cost ten thousand (\$10,000.00) dollars, should the general assembly authorize it by an act of appropriation.

The character of the water which is used here is sometimes so bad that a due regard for health and cleanliness requires that it be filtered. To thus purify so large a quantity of water will require a filter of great capacity. It would be wise to have it so located as to filter all the water taken from the city water works before it enters the institution reservoir, that the gradual filling up of the reservoir with foreign material and the consequent expense of cleansing it at intervals may be avoided. The cost of a suitable filter and filter-house would be three thousand (\$3,000.00) dollars.

The general assembly at its last session passed an act making an appropriation for transforming the building used for a barn into a cottage. This work is now in progress and will be completed in a few weeks. No appropriation was made for erecting a barn in lieu of the one thus disused as such. This deficiency has in part been overcome by transforming

a part of the old wood-shed into a barn for cows and adding to it another structure formerly used for the same purpose. This with some open sheds makes quite a good provision for the care of the cows, and will answer its purpose for a number of years. It was tried to make provision for the care of horses in a similar manner, but the funds at command available for this use were not sufficient. To meet this deficiency a rented barn on neighboring property is rented. The owner of the property is liable to want it at any time. The institution should have a good barn for the keeping of horses, carriages, wagons, harness, provender, &c., on its own premises. Three thousand (\$3,000.00) dollars will be needed for this purpose.

Three thousand (\$3,000.00) dollars per annum will also be required for repairs and improvements, the amount that has usually been appropriated for that purpose.

The appropriation of one thousand five hundred (\$1,500.00) dollars made by the last general assembly for the erection of fire escapes has not yet been drawn upon. I would recommend that the next general assembly be requested to add one thousand three hundred (\$1,300.00) dollars to it that the fire escapes may be made in the form of verandahs on the north and south lateral wings. This would make eighteen places of escape on each story instead of one as was contemplated at first, and would be available from the main building, and the north and south lateral and transverse wings.

I would also recommend to be taken under consideration the expediency of introducing the electric light into the dining hall, study rooms, chapel, public halls and yard. This light, though of recent origin, has been so far perfected that for large rooms where many persons are assembled it is far superior to gas. After the machinery for its production has been secured it is much cheaper than gas, and in time might effect so much of a saving as to pay for its production. If future improvements should make it available for use in smaller apartments the requisite modifications could be readily made. The subject of light is one of vastly more consequence in an institution for deaf-mutes than anywhere else. The eye of the mute serves him the double purpose of eye and ear, and during the hours of wakefulness never rests. Deaf-mutes are consequently more exposed to diseases of the eye than any other class of persons, and while it is true that in certain ways their infirmity obliges them to quicken their visual perception by habit, and the full education of the organ in

question, it is also true that a larger proportion of them suffer from disease of the eye brought on by constant use, than of any other class of persons. An impairment of the eye in the early life of a youth is an irremediable disaster for the remainder of his life. The necessary apparatus for manufacturing this light can be obtained for two thousand (\$2,000.00) dollars. The institution already has the necessary engine for operating the machinery.

I would again renew my recommendation for the purchase of four lots of ground immediately fronting the institution. They are liable to be sold at any time and thus pass beyond the reach of the institution. While used as they now are the institution suffers no inconvenience from them; but when occupied by unsightly structures as the portion of them directly in front of the main building must be, as the manner of their laying out makes that the rear of two sets of lots where the barns and out buildings must be located. These lots are also needed to make the size of the front yard comport with the size of the buildings.

Again thanking you for continued confidence, and counsel, and appreciating your lively interest in the institution this report is respectfully submitted.

PHILIP G. GILLET,
Superintendent.

Illinois Institution for the Education of the Deaf and Dumb,
SEPTEMBER 30TH, 1880.

TERMS OF ADMISSION.

I. Applicants should not be under ten nor over twenty-one years of age. Children possessing weak constitutions, or who have failed to attain the ordinary growth and vigor of mind and body, should not be brought to the Institution under twelve years of age.

II. The annual session commences on the third Wednesday in September, and continues till the second Wednesday in June. The proper time for the admission of pupils is *at the opening of the session*; and punctuality is so important that none will be received, except in extraordinary cases, who do not come at or about that time.

III. Pupils from Illinois are admitted to all the privileges of the Institution free of charge—being provided with board, washing, fuel, lights, tuition, books, and everything necessary, except clothing and traveling expenses.

IV. Each pupil should come provided with sufficient clothing to last one year, or with the money to procure it. He should also have a trunk, with a good lock and key, and large enough to contain all his clothing, each article of which should be distinctly marked with his name.

V. In addition to the above outfit, a small sum of money should be deposited with the Superintendent, to meet incidental expenses—repairs of shoes, postage, etc.—any part of which remaining on hand at the close of the session shall be returned.

VI. Except in cases of sickness, all the pupils are expected to remain at the Institution from the commencement till the close of each session, at which time parents or friends should be prepared to take them home to spend the vacation.*

VII. All applications from a distance, letters of inquiry, etc., etc.,

*Friends of pupils are desired not to ask a departure from this rule.

The teachers are retained at their posts of labor during the holidays as well as at all other time during the session. The school exercises are not discontinued, and must not be deranged by the temporary withdrawal of pupils to visit home. The summer vacation is long, and affords ample time for such visits.

should be addressed to PHILIP G. GILLET, LL. D., Superintendent of the Institution, Jacksonville, Illinois. All letters for pupils should contain the words "Institution for the Deaf and Dumb", as a part of their direction.

In relation to indigent pupils, the General Assembly, in February, 1857, passed the following act, viz:

"SECTION 10. In all cases where the parents of pupils sent to the Institution for the Education of the Deaf and Dumb, and the education of the Blind, are too poor to furnish them with good and sufficient clothing, or where said pupils are without parents, and unable to furnish themselves with such clothing, the judge of the county court of the county from which they are sent, shall certify the same to the Principal, who shall procure such necessary clothing, and charge the same to said county, and present the account, with the vouchers, to the Auditor of Public Accounts, who thereupon shall draw upon the county treasurer for the amount so charged to the county, and the said county shall annually assess and collect, by tax, the amount necessary to pay said order or orders—and if said county shall fail so to do, the circuit court in said county shall, on application therefor, compel the same by mandamus."

Approved February 13, 1857.

N. B.—Persons coming to the Institution from aboard can take the West State street horse cars and be carried to the Institution for five cents. Those who arrive after night can find good accommodations at either the Dunlap, Park, Southern or Metropolitan Hotels till morning.

ACKNOWLEDGMENTS.

Grateful acknowledgments are hereby returned for the following favors, which have largely contributed to the improvement and pleasure of the pupils, and to the efficiency of the Institution:

To the officers of the Chicago, Alton & St. Louis; Wabash, St. Louis & Pacific; Peoria, Pekin & Jacksonville; Chicago, Rock Island & Pacific; Illinois Central; Chicago & North-Western; Champaign, Havana & Western; Indianapolis, Decatur & Springfield; Jacksonville & South-Eastern; St. Louis, Alton & Terre Haute; Chicago, Pekin & South-Western; and Chicago, Burlington & Quincy Rail Roads, and Jacksonville City Railway, for favors in transporting pupils and officers.

To the Department of Education for pamphlets.

Hon. Wm. M. Springer, M. C., for valuable public documents.
